CASE STUDY

TOLKA ESTUARY GREENWAY PROJECT

PROJECT OVERVIEW

Northstone was delighted to be part of the Tolka Estuary Greenway at Dublin Port, commissioned by the Dublin Port Company. The Principal Contractor, Wills Brothers Ltd, appointed Northstone to install circa 8,000m² of our NorthDec Decorative Surfacing.

The project required a dedicated 3.2km cycle and landscaped pedestrian route along the northern perimeter of the Port overlooking the Tolka Estuary. It was an ambitious celebration of an area never accessible before to the Public.

OUR SOLUTION

NorthDec is a specialist hand applied surface treatment, consisting of thermosetting resin binder, dressed in a kiln-dried aggregate. In partnership with Wills Brothers, Northstone proposed a local 1-3mm Golden Pea Gravel as a dressing aggregate and liaised with Roadstone (A CRH Company) to ensure the asphalt substrate was the optimal choice to mitigate expensive pre-treatment works. This early engagement saved cost and time for the client.

OUTCOME & BENEFITS

The installation was completed in phases, which required Northstone to provide flexible programming. The NorthDec system has proven to be an excellent choice for this project, offering a visually appealing and safe walking and cycling surface while utilising local aggregates. This approach aligns well with Dublin Ports' vision of creating a vibrant and functional public space.
